## Dani achieves double certification for traceability and ethical commitments

Italy

Published: 21 May, 2021

Credit: Gruppo Dani

The Italian tanning and processing group has achieved two milestones in terms of traceability of raw materials, reliability of processing, ethical commitment and environmental sustainability. These certifications make Dani both the first tannery in the world to be certified according to the international standard ISO 17033 regarding ethical claims, as well as one of the very few Italian companies to be certified according to the technical specification ICEC TS SC 410 regarding the traceability of the supply chain of raw hides.

The recently introduced international ISO 17033 certification makes Dani the first tanning company in the world able to guarantee that all hides and skins come from cattle farms for food purposes only, almost exclusively European and therefore subject to the strictest animal welfare laws.

Dani has achieved the raw material traceability certification for the entire range of products according to the technical specification ICEC TS SC 410, with an "excellent" rating (80/100). This means the company can guarantee the precise and complete mapping of the origin of raw hides and skins, identifying slaughterhouses and farms.

Giancarlo Dani, President and CEO of Dani, said the company has always been centred around paying attention to raw materials, respecting everyone within the supply chain, paying attention to the recovery of every good, "from rainwater to trimmings" and limiting the selection of polluting materials.
